

# Woodland Foodchains I

Name. \_\_\_\_\_

**SOUTH-YORKSHIRE**  
*forest*  
A National *conservation* forest Partner

grey squirrel

Here are pictures of some of the plants and animals which live in a wood.  
The living things are linked, depending on each other for their survival.  
Draw arrows to show what each animal eats.  
Notice that some eat more than one thing.  
Remember that the arrows point in the direction of the flow of energy.  
Where does all the energy come from? \_\_\_\_\_

hedgehog

jay

ground beetle

Speckled wood butterfly

aphid

Oak leaf caterpillars

robin

hazel nuts

fungus

ant

millipede

sparrowhawk

bank vole

blackbird
