

Woodland Foodchains 2

Name. _____

You should now have discovered that understanding a woodland is a bit like doing a jigsaw puzzle.

At first you have nothing but a box of pieces.

Gradually, however, you begin to see how the pieces fit and the picture becomes clearer.

There are many ways to sort out the information that you have collected. One of them is to look at the energy flow in the wood by sorting out the food chains.

From the links that you have drawn on the last worksheet **pick out six different foodchains and draw them on the lines below.** The first has been filled in for you.

Some chains have only three links. Can you find any longer ones? What do they all start with?

PRODUCER
